How To Make Planes Less Dangerous

I was reading the news this week about the Turkish aeroplane that crashed in Amsterdam, a truly horrific experience for all of those involved I am sure. I would say that I travel in an aeroplane on average six times every year and I am quite worried each and every time. It is the sense and the knowing that I am not in control of the situation. In this article I will be providing an idea that would not only make air travel safer but would also ensure that the experience for all concerned was far less stressful.

I am a frequent business (I am a [London IT services](#) expert and I work for a large [IT support company London](#)) flyer as and I often use the Gatwick valet parking. I happen to think that the valet parking Gatwick south terminal meeting point service providers are the best around - anyway back to my idea!

My idea would be to create a huge parachute which would be deployed if and when required. For example if the pilot found that both of the planes engines had failed then instead of panicking and thinking about how to crash land the plane he/she could instead open up the parachute which would in turn enable the aeroplane to slowly fall to the land below. With the help of the landing gear this would then be a relaxed, perhaps even enjoyable, solution to the problem.

The pilot would of course need to make the decision as to where it would be safe to deploy the parachute but this in fairness should be a fairly logical decision to make.

So what are the potential problems with creating such a parachute? Well to start with is the sheer weight and size of the average aeroplane and secondly would be the cost involved. In reality I would be happy to pay an additional amount if I knew that the aeroplane that I was travelling in had a parachute and I am sure that many other people would as well. As for the problematic design requirements I am fairly confident that there is a genius out there who could find a solution, what is more if they could their name would go down in history and they would become extremely wealthy, virtually over night.

I hope that you have found this article to be of interest - maybe one day my ideas might become a reality!
